SUMMARY

Computer Science undergraduate specializing in AI/ML with experience in machine learning, NLP, LLM-based applications, and structured/unstructured data processing. Built systems involving prompt-based workflows, document Q&A, response evaluation, and applied ML with a strong foundation in problem-solving and data-driven systems.

EDUCATION

B.Tech in Computer Science (AI & ML), IILM University, Greater Noida | *CGPA: 9.2/10* 2023 – 2027

SKILLS

Languages	Python, C++, JavaScript
ML & NLP	Machine Learning, NLP basics, Prompt engineering, Response evaluation
LLM & RAG	LLM applications (LLaMA, Gemini, Claude), RAG workflows, document Q&A
Data Handling	Structured/unstructured data processing, OCR pipelines, preprocessing, feature extraction
Evaluation	Accuracy analysis, relevance evaluation, error analysis, performance benchmarking
Tools	Pandas, NumPy, Matplotlib, Scikit-learn, Git, Streamlit

EXPERIENCE

AI/ML Intern Mar 2026 – Apr 2026
[Wildlife Institute of India \(WII\)](#) *Project: Elephant Re-Identification System*

- Built an open-set elephant re-identification system using ConvNeXt-Tiny with part-based pooling, generating 384-D embeddings for 259+ identities.
- Performed preprocessing, augmentation, embedding optimization, and evaluation on structured image datasets for identity retrieval tasks.
- Achieved Rank-1 accuracy of 92.16% and Rank-5 accuracy of 100% using Test-Time Augmentation (TTA) on unseen identities, with a low false merge rate of 0.42% at a 0.75 threshold.

PROJECTS

LexScan – AI Contract Risk Analyzer [GitHub](#)

- Developed an AI-powered contract analysis system enabling risk detection and document-based Q&A using LLaMA 3.3 via Groq API.
- Implemented prompt-based workflows and retrieval pipelines for document-grounded conversational querying.
- Processed multi-format documents (PDF, DOCX, images) using OCR (Tesseract.js), PDF.js, and Mammoth.js for end-to-end pipeline support.

PathShala AI – AI Co-Teacher for Rural India [GitHub](#)

- Designed an AI system generating structured multi-grade lesson plans in under 15 seconds.
- Addressed real-world constraints of single-teacher classrooms handling 5 grades (60+ students).
- Integrated voice-based interaction and multi-channel delivery via Android, WhatsApp, and telephony APIs.

CERTIFICATIONS

- [Introduction to Agentic AI on AWS](#) – AWS Training & Certification *Dec 2025*
- [AI Fundamentals](#) – IBM *Jul 2025*
- [Intro to Machine Learning](#) – Kaggle *Sep 2025*

EXTRA-CURRICULAR ACTIVITIES

- Built [PathShala AI](#) during AI for Bharat Hackathon.
- Advanced to final round (Round 2) in HackVeda (AWS Hackathon) with BimaBot.
- Practiced 50+ DSA problems on LeetCode and consistently maintain AI/ML and full-stack projects on [GitHub](#).
